Finance App – UI Screens & Navigation (Hive-Based)

---

1. Navigation Architecture

Approach

Use:

- **Bottom Navigation Bar** (main sections)
- **Stack Navigation** (for screen transitions)

Main Navigation Tabs

1. Home (Dashboard)
2. Transactions
3. Reports
4. Settings

---

2. Route Structure

```
/
├── /home
├── /transactions
├── /add-expense
├── /add-income
├── /reports
├── /settings
├── /backup
├── /restore
```

3. Screen Breakdown

3.1 Splash Screen

Purpose

- Initialize Hive
- Load data

UI

- App Logo
- Loading indicator

Navigation

→ Auto redirect to `/home`

3.2 Home Screen (Dashboard)

UI Components

- Total Balance Card
- Total Income
- Total Expense
- Recent Transactions List

Floating Button

- ➕ Add Transaction

Actions

- Tap ➕ → Open bottom sheet:
  - Add Expense
  - Add Income

Navigation

- Add Expense → `/add-expense`
- Add Income → `/add-income`
- View all → `/transactions`

3.3 Transactions Screen

UI Components

- List of all transactions
- Filter bar:
  - Date filter
  - Category filter
  - Type toggle

Each Item

- Amount
- Category
- Date

Actions

- Tap item → Edit/Delete modal

Navigation

- Edit → same screen with pre-filled data
- Delete → confirmation popup

3.4 Add Expense Screen

UI Components

- Amount input
- Category dropdown
- Date picker
- Notes field

Buttons

- Save
- Cancel

Navigation

- Save → store in Hive → `/home`
- Cancel → back

3.5 Add Income Screen

(Same as Expense but different type)

3.6 Reports Screen

UI Components

- Monthly summary
- Category-wise breakdown
- Charts (optional)

Filters

- Month selector

3.7 Settings Screen

UI Components

- Backup Data
- Restore Data
- Manage Categories
- Theme Toggle

Navigation

- Backup → `/backup`
- Restore → `/restore`

3.8 Backup Screen

UI

- Last backup date
- Button: "Create Backup"
- Button: "Share Backup"

Flow

- Click Create → generate JSON file
- Show success message

3.9 Restore Screen

UI

- Button: "Select Backup File"
- Warning text

Flow

- Select file

- Confirm overwrite
- Restore data

---

4. Bottom Navigation Layout

[Home] [Transactions] [Reports] [Settings]

---

5. Button Flow Mapping

Add Transaction Flow

Home → ➕ Button
→ Choose (Expense / Income)
→ Fill Form
→ Save
→ Data saved in Hive
→ Redirect to Home

Edit Transaction Flow

Transactions → Select Item
→ Edit Screen
→ Update
→ Save
→ Back to Transactions

Backup Flow

Settings → Backup
→ Click Create Backup
→ Generate JSON
→ Save file

→ Show success

Restore Flow

Settings → Restore
→ Select file
→ Confirm overwrite
→ Restore data
→ Reload UI

---

6. Navigation Code Structure (Flutter)

Main App

```
MaterialApp(
  initialRoute: '/',
  routes: {
    '/': (context) => SplashScreen(),
    '/home': (context) => HomeScreen(),
    '/transactions': (context) => TransactionsScreen(),
    '/add-expense': (context) => AddExpenseScreen(),
    '/add-income': (context) => AddIncomeScreen(),
    '/reports': (context) => ReportsScreen(),
    '/settings': (context) => SettingsScreen(),
    '/backup': (context) => BackupScreen(),
    '/restore': (context) => RestoreScreen(),
  },
);
```

Navigation Example

```
Navigator.pushNamed(context, '/add-expense');

Navigator.pushNamed(context, '/backup');
```

---

7. UI Design Guidelines

- Clean & minimal UI
- Large buttons for quick entry
- Use cards for financial summary
- Color coding:
    - Income → Green
    - Expense → Red

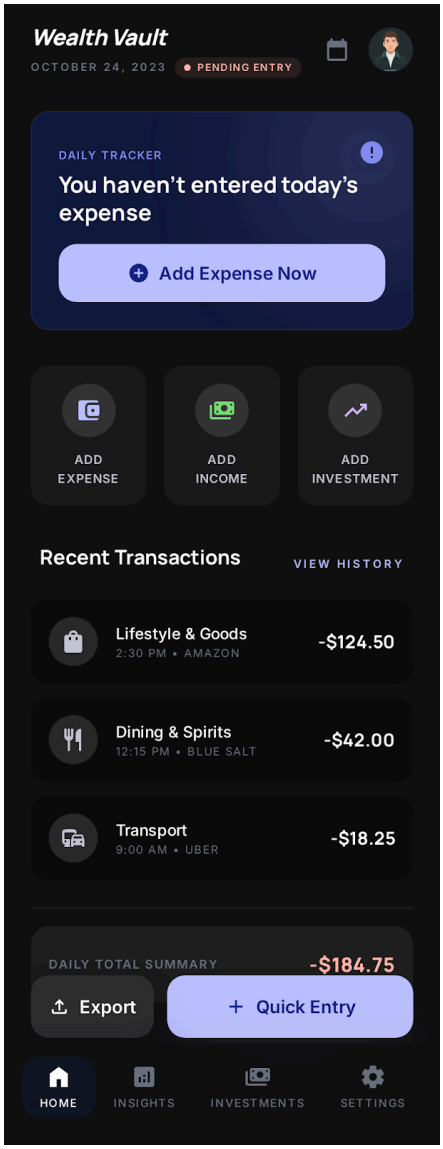
---

8. Codex Instructions (IMPORTANT)

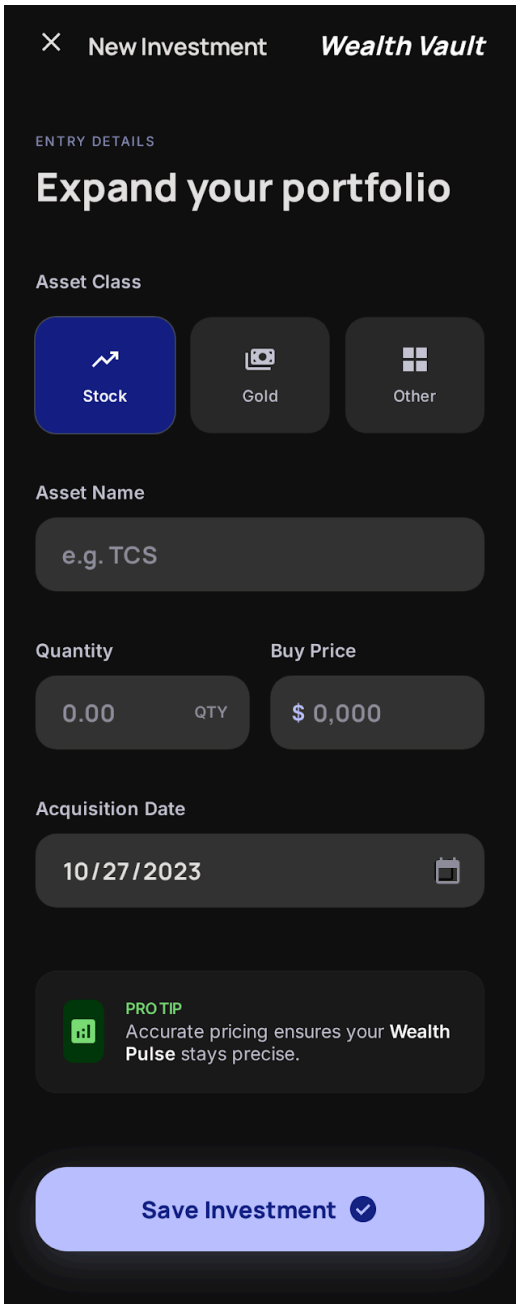
- Generate each screen as a separate widget
- Use reusable components
- Maintain route-based navigation
- Integrate Hive in Save actions
- Ensure state refresh after data change

Refer the screenshot for the UI:

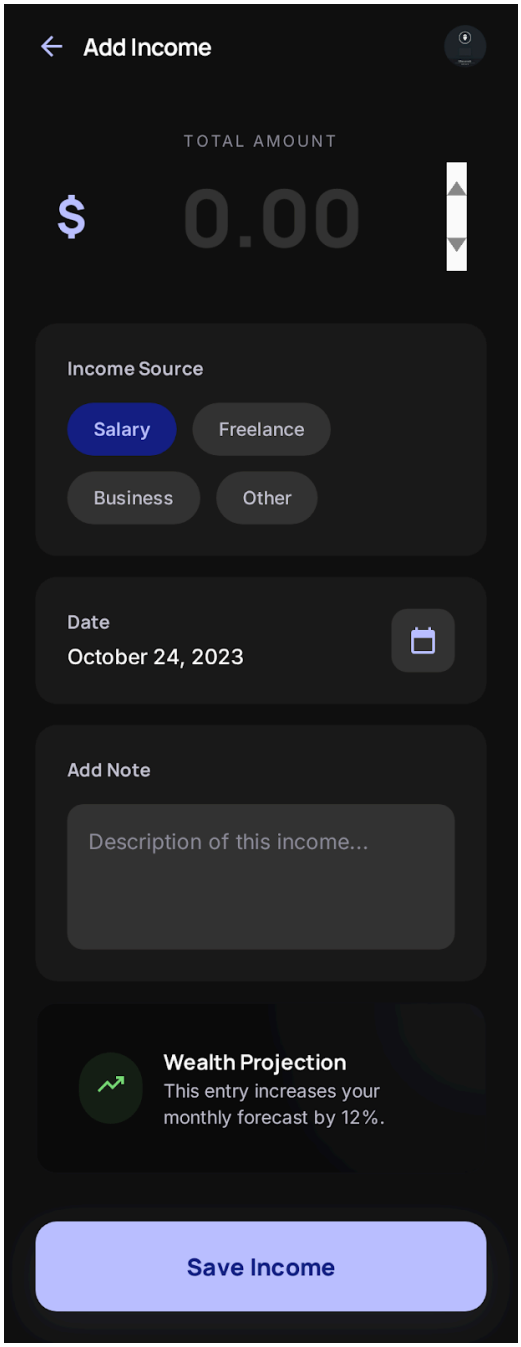
Home screen:



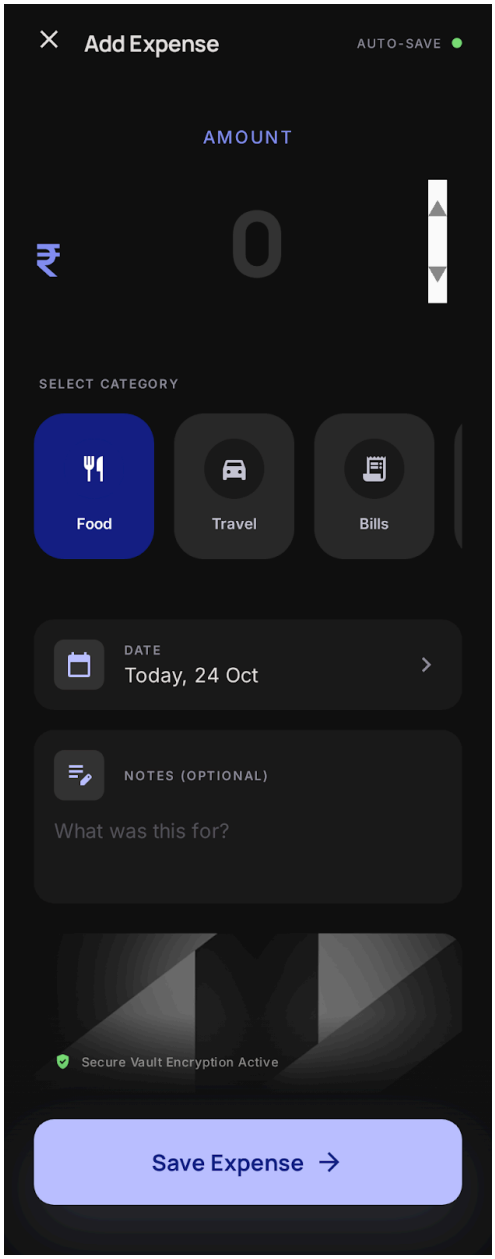
Add investment screen:



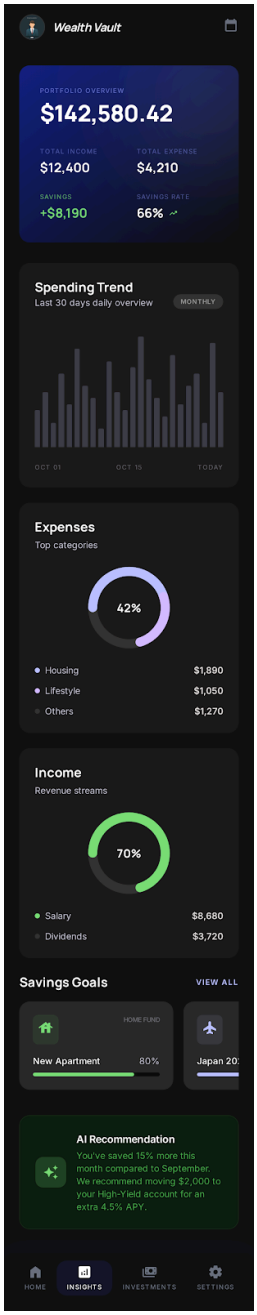
Add income screen:



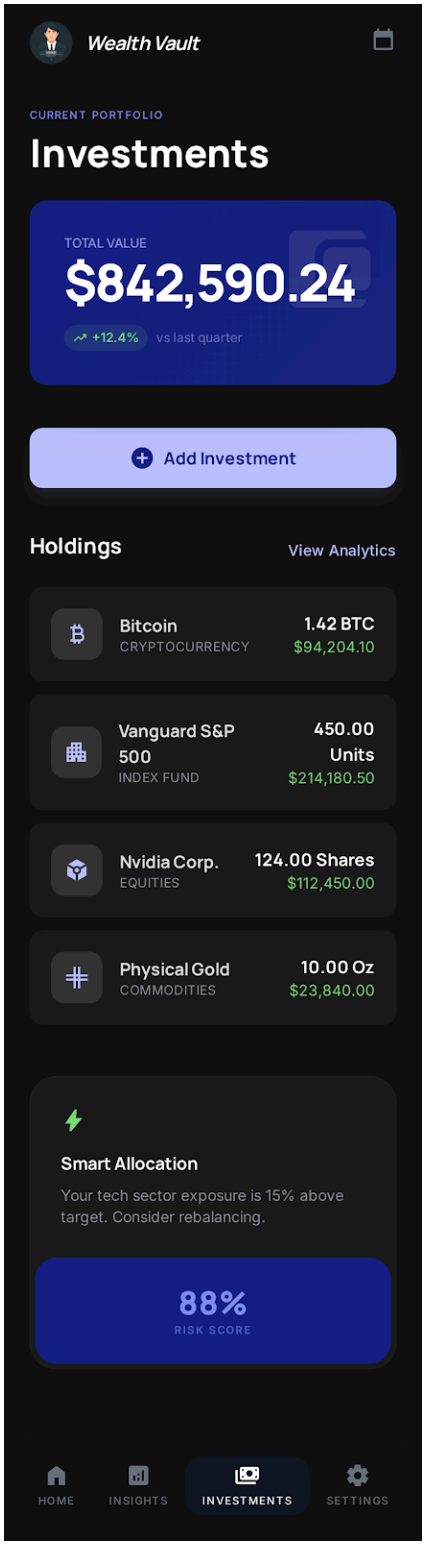
Add Expense screen:



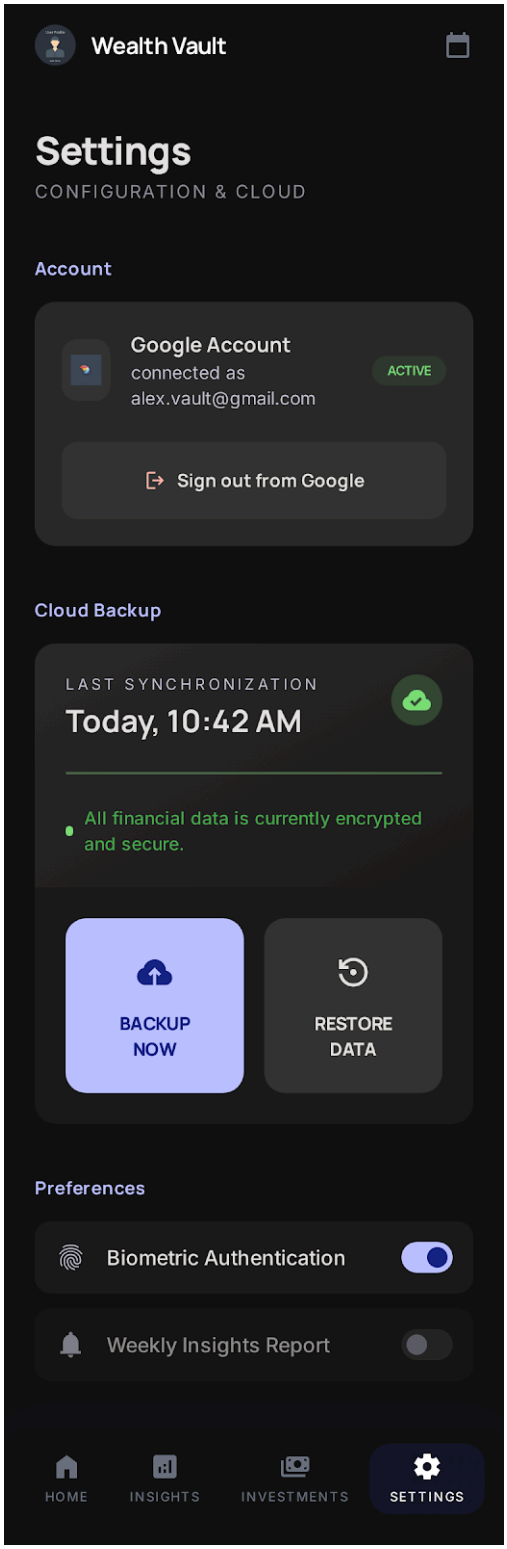
Insight screen:



Add Investment screen:



Settings screen:



Final Summary

You now have:

- Full screen breakdown
- Navigation routes
- Button flows
- UI structure
